## Skills

HTML  
CSS  
BOOTSTRAP  
Basic Javascript  
Core PHP  
Management  
Comunication

## Objective

I am a highly motivated recent IT graduate seeking a full-time position in web development where I can apply my skills in front-end and back-end technologies to build responsive, user-friendly websites that enhance user experience and support your organization's digital goals.

## Experience

|  | <b>Blood Donation Management System</b>                                                                                                                                                                                                                                                                                              |
|                                                                                     | The Blood Donation Management System is a software application designed to manage the collection, storage, and distribution of blood donations. It facilitates a streamlined and efficient way to connect blood donors with recipients and manage blood bank operations.                                                             |
|                                                                                     | The system provides an interface for donors, recipients, and administrators. Donors can register, update their details, and view donation history. Recipients or hospitals can request specific blood types and check availability. Administrators can manage donor information, blood stock, requests, and organize donation camps. |
