Technology Stack	● Database: MySQL ● Language: PHP (Codeigniter), MySQL, HTML, CSS, Bootstrap, JQuery, Javascript, AJAX
Responsibilities	● Understanding requirements ● Designing relational Database structure ● Website designing and developing. ● Creating dynamic control panel ● Designing and developing admin control panel in PHP (Codeigniter)

CheckN – Cure for FOMO	
Just as other GPS apps can show you where a ride is or where traffic is - right now, CheckN shows you where the people are - right now. The app tells you where the hottest places and venues are in real-time. It shows where everyone in your extended friend group is right now. It also shows the thumbnail pics of the people you haven't met yet who are at a particular location right now. It even shows the ratio of men to women at each location. With CheckN you can select the types of places you're interested in (bars, clubs, restaurants, parks, museums, you name it), as well as choose your desired neighborhood or geography. Once you arrive at a venue and CheckN you are then able to search the thumbnail photos of other checked in users at that location, filtering by age and gender, to see who else is there. Tapping on the thumbnail pic of another checked in user allows you to see what friends you may already have in common and send a friend request. The app has a range of privacy features such as "Go-anonymous" or "Only friends can see me". It also allows users to receive exclusive deals from venues, including concerts and sports events. CheckN takes the guesswork out of wondering where all the people are. It's the cure for FOMO.	
Technology Stack	● Database: MySQL, MongoDB ● Language: Node js
Responsibilities	● Understanding requirements ● Designing relational Database structure ● Creating Web services in Node js ● Designing and developing admin control panel in Node Js

Rent this 360	
The Rent this 360 platform places the customer at the forefront, with order tracking capabilities, direct message system for the front-office, and live order updates. Rent this 360 utilizes a booking page, driver's app and a custom CRM to allow your business to function smoothly, and without a hiccup. Rent this 360 was designed to help Waste Management businesses get over the convoluted, lunky CRM platforms of the past, and transition to the seamlessly easy platform of the future.	
Technology Stack	● Database: MySQL ● Language: Node Js ● Framework: MySQL, HTML, CSS, Bootstrap, JQuery, Javascript, AJAX
Responsibilities	● Understanding requirements ● Designing and developing customer portal, crm portal and admin panel and booking.
