SUMMARY

Node.js Developer with over 2 years of experience in building web applications using MongoDB, Express.js, and Node.js. Proficient in developing applications, managing databases, and creating dynamic, user-friendly websites. Experienced in utilizing tools like Git, Postman, and Socket.io, and working with templating engines like Nunjucks and EJS. Highly adept at working in back-end environments and integrating third-party APIs such as Jira

WORK EXPERIENCE

AIS Technolabs Pvt. Ltd.
Software Engineer

Jan 2023 - Present

- Collaborated with senior developers to build and maintain Node.js applications
- Designed and implemented RESTful APIs and real-time communication features for various projects.
- Wrote unit and integration tests to ensure code quality
- Managed database operations using MongoDB and SQL.
- Created and managed database schemas to support business processes.
- Developed projects such as crash games, Employee management, Dating Application, and Ludo games.
- Built an admin panel for managing game projects and user data
- Optimized backend performance and implemented Node.js frameworks to enhance system efficiency
- Used Jira for project and task management.
- Integrated push notification service for mobile app using Firebase and node js.
- Created REST API and WebSocket to pass data to the front-end application.

EDUCATION

Goverment Polytechnic - Bhuj (GTU)
Diploma in Civil Engineering

2013 - 2017

S.S.C
Shree Dudalal Dhanjibhai Ladani Vidhyaalaya - Keshod
Percentage/Grade : 83.73%

2012 - 2013

SKILLS

- **Languages & Frameworks:** Javascript, Node Js, Express Js, HTML, Tailwind CSS, MongoDB, SQL, Prisma ORM
- **Tools & Platforms:** Git, Github, Postman, Visual Studio Code, MongoDB Compass, JIRA

PROJECTS

EMPLOYEE MANAGEMENT SYSTEM :

- Designed and developed a comprehensive Employee Management System
- manage work logs, projects, leaves, Cost Management, and work-from-home applications
- Role-based access is available for Super Admin, PM, Team Leader, and Normal User.
- Integrated Jira APIs to track and display employee work logs and task updates
- ensuring seamless performance monitoring and reporting.
- Integrated a Structure for displaying employees' Work in a monthly Timesheet
- And Other Manual Worklog & Pending work log for Employee's manual work-logs and PM can Approve the work logs from the Pending work log page Using JIRA APIs
- There is also a Section called Resource Management in this section Admin Or PM can assign the project to Employees so all PMs can see which employee is in which project and manage accordingly. And there are many filters to filter data

DATING APPLICATION :

- Developed a Dating Application using React Native for the frontend, Node.js for the backend
- Key features include User profile setup, Photo uploads, and Swipe-and-match functionality
- Real-time notifications for likes, matches, and messages
- Third-party integrations Firebase for notification and real-time data synchronization Twilio for SMS-based notifications
- Implemented real-time chatting to enable smooth user interaction
- Integrated subscription plans Silver, Gold, Platinum, Each unlocks premium features
- Built an admin panel for Managing user data, Content moderation Tracking subscriptions
- Designed and developed RESTful APIs for efficient and scalable communication between frontend and backend systems.

LUDO GAME :

- Developed a feature-rich Multiplayer Ludo Game using modern web technologies.
- Real-time multiplayer functionality, User authentication, Interactive graphics, Leaderboard system
- Backend powered by Node.js and MongoDB for efficient database management
- Real-time communication, Integrated Socket.IO for Seamless multiplayer gameplay, In-game chat, and Coin-sharing functionalities
- Monthly bonuses for top 3 players on the leaderboard, Shareable game invite link, Bank account integration for in-game transactions
- Admin panel built for Managing user data, Monitoring game records ensuring control and moderation
