LANGUAGE

- English
- Hindi
- Gujarati

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER

UPSQUARE TECHNOLOGIES | OCT-2022 - PRESENT

PROJECTS

Hiring Hub

- Developed and managed interfaces for candidate management, including data manipulation, interview scheduling, and approval tracking. Designed dynamic candidate details tables and vacancy trackers for efficient data visualization.
- Led the development, streamlining candidate approval workflows. Created a dashboard for viewing candidates and decision-making. Implemented transparent status tracking for candidate progress. Engineered candidate profiles and logs for user experience improvement.
- Oversaw user management and system security. Implemented manager and HR user account functionality.

Project Management Tool

- Developed comprehensive workspace and project management platform.
- Streamlined project tracking, task assignment, and component management.
- Utilized Redux for efficient state and component management within the platform.
- Implemented localization to enhance accessibility for users.
- Enabled users to add comments and commit changes directly to to-do items to improve task tracking.
- Supported the upload of various file types for seamless collaboration.
- Successfully implemented the Trix editor to enhance communication.

E-Signature Solution Web

- Developed an innovative e-signature platform enabling users to upload documents for digital signing and collaborative editing.
- Implemented comprehensive document annotation features, allowing users to add shapes, text, custom stamps, images, and draw personalized signatures directly on documents.
- Created a user-friendly dashboard providing complete document visibility, including detailed audit trails and easy document download capabilities.
- Enabled seamless team collaboration through member invitations and comprehensive document management tools.

Audio Processing Web Application

- Developed a comprehensive audio recording and management platform with advanced features for both professional and personal audio processing.
 - Implemented multi-format audio recording capabilities, along with powerful editing tools such as trimming, conversion, merging, and transcription.
 - Created a robust user management system with tiered access levels, including a freemium model offering basic audio recording with time restrictions, and premium subscriptions for unlimited recordings and advanced audio features.
 - Designed an intuitive user interface allowing users to create audio folders and manage files through operations like duplication, downloading, and deletion, with integrated authentication and subscription management features.
-
