PROFILE

In my 2.11 years of a experience at a service-based company, I've immersed myself in diverse testing domains, including mobile apps, web platforms, performance evaluation, load testing, and even slot game testing. Beyond technical proficiency, I prioritize effective time management, critical thinking, and meticulous documentation. Customer-centricity drives my approach—I tailor testing strategies to meet their expectations. My strengths lie in efficient task completion, problem-solving, and collaborative teamwork.

PROFESSIONAL EXPERIENCE

August 2022 – present

Scaletech Solution

Software QA Engineer

- Effectively managing multiple projects concurrently, I ensure timely delivery of quality products, meeting all deadlines with precision.
- I work closely with developers and project managers to understand project Requirements and Expectations that met with client needs.
- Conducted functional and exploratory testing across web, mobile, and desktop platforms, identifying defects and usability issues.
- Proficient in documenting detailed bug reports with **Jira**, **Clickup**, **Asana**, and **Trello**. Skilled in writing comprehensive test cases using **Test Rail**, ensuring efficient issue resolution.
- Worked Designing tools like **Figma** with designer team to make it more effective product with excellence user Experience.
- Active participant in daily stand-ups, sprint planning, and retrospectives, contributing to enhanced team collaboration, productivity, and software quality.
- Resolved high-priority bugs and ensured smooth product releases.
- Quickly solved important problems that came up during testing.

PROJECTS

Matflixx (Web application)

- Matflixx is a data analytics platform focused on the German stock exchange, providing insights into market trends.
- I was responsible for functional, usability, cross-browser testing, and API testing using Postman and Swagger.
- Created 3000+ test cases, validating data visualization and reporting accuracy.
- Resolved critical API failures, improving data accuracy by 25%.
- Followed the Agile & Scrum methodology, ensuring structured test execution and reporting.

Fanblast (Mobile web application)

Entertainment platform for fan engagement and content creation.

- Led end-to-end QA, covering functional and non-functional testing across multiple devices.
- Worked with PMs and developers to resolve defects and meet tight deadlines.
- Ensured smooth user experience and flawless payment integration.

MMSCAN (Web application)

- A multi-role account management system for dealers, admins, and super admins.
- Tested and validated features like account management, reporting tools, financial statement generation, and business planning functionalities.
- Ensured the delivery of high-quality custom features tailored to client requirements.

Yonex (Web application)

Sports management platform focusing on athlete, scouting, and contract workflows.

- Ensured usability, and scalability through thorough testing.
- Improved task management and teamwork via regular feedback cycles.

NFL (National Football League) (Web application)

NFL is a web application platform which provide some feature like lombardi vision (give me player history) by uploading their image , video tap feature.

Ensured efficient testing methods by maintaining complete documentation such as test plans, cases, and defect reports.

Rate-Fuchs (Web Application)

- Rate-Fuchs is a French web-based gaming platform featuring interactive games like Sudoku, Word Search, and Grid Puzzle
- As a QA Engineer, I performed various testing activities, including functional testing, regression testing, UI/UX testing, cross-browser testing, and responsive testing.
- I identified, reported, and tracked bugs to ensure a seamless user experience and worked closely with the development team to validate fixes and implement improvements.
